Antisense molecules to polynucleotides encoding HPYP are used for the treatment of diseases, associated with the expression of HPYP. Polynucleotide, fragments, or complement, and antibodies specifically binding HPYP can be used in diagnostic assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This cDNA encodes a human pyrophosphatase (HPYP). HPYP is produced using genetically engineered expression vectors and host cells comprising the nucleic acid sequences encoding HPYP. HPYP and agonists, antibodies, or antagonists specifically binding HPYP are used in the prevention and treatment of cancer and inflammatory diseases. Antisense molecules to

bone marrow, prostate tissue and could involve supplying various natural molecules, in drug regimes that allow cell division and differentiation to occur. The polynucleotides may be used to detect quantify gene expression in biopsied tissues in which expression of HPYP may be correlated with a disease, for screening libraries of
HPYP may be correlated with a disease, for screening libraries of compounds in various drug screening techniques, and in molecular biology techniques. Vectors expressing antisense and antagonists or inhibitors of the protein may be used to suppress the excessive proliferation of inflammatory cells which cause damage in immunological disease.
                                                                                                                                                                                                                                                                                                                                in the diagnosis, prevention and treatment of inflammatory giseases a cancer. HPYP and the vector encoding HPYP may be used to in the regeneration or transplantation and development of nerve, pancreatic,

The gene number, and the clone it is derived from, are detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAX00602) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 87 novel genes and their fragments (nucleic acid sequences: AAX00611-X00724; amino acid sequences AAW07807-W688004) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Brewer LA,
Greene JM,
                                                                                                                                                                                                                                                                                                                conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations the new polynucleotides. Specific uses are described for each of the polynucleotides, based on which tissues they are most highly expresse polynucleotides, based on which tissues they are most highly expressed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated human genes and the secreted polypeptides they encode - useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders

generate fusion proteins by linking to the gene to a hun FC portion (e.g. AAX00602) for increasing the stability protein as compared to the human protein only. The invention relates to 87 novel genes and their fragme acid sequences: AAX00611-V0077.
                                                                 conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 87 polynucleotides, based on which tissues they are most highly expressed
                                                                                                                                                                                    The invention relates to 87 novel genes and their fragments (nucleic acid sequences: AAX00611-X00724; amino acid sequences AAW67807-W68004) which are useful for preventing, treating or ameliorating medical

antitumor activity. Polypeptides (I) encoded by (A) are used: (i) for identifying agents for treatment of prostatic cancer and (ii) for therapy of prostate cancer, optionally where expressed by gene therapy methods. (A) is also used to isolate full-length genes (for gene therapy) and for recombinant production of (I), which can be used to raise
                                                     This invention describes novel nucleic acid sequences (A) that a expressed at high level in prostatic tumor tissue and encode generoducts or their fragments. The products of the invention have

(A) are identified by assembly of ESTs (expressequence tags) before they are analyzed for expression pattern (tis specificity). This approach eliminates many of the false results, especificity, associated with known methods that use single (usually short) ESTs. AAX33423-Z33476 represent expressed sequence tags described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

                            CC of the invention can be used for gene therapy. (A) are used (1) for CC recombinant expression of polypeptides (B) and (ii) to isolate complete CC genes. (B) are used (i) to identify agents suitable for treatment of CC ovarian cancer; (ii) directly for treating this form of cancer (c) including expression from gene therapy vectors) and (iii) for generation CC of specific antibodies. (A) are identified by assembling ESTs (expressed CC expression patterns. This allows a significantly longer fragment of the CC expression patterns. This allows a significantly longer fragment of the CC gene to be revealed, so should reduce the number of fallures associated CC with the fact that ESTs from different libraries may represent different CC parts of the same unknown gene, distorting the estimated frequency of CC occurrence in a particular tissue. AAZT/450-27/572 represent the human CC ovarian tumor cDNA library derived EST fragments described in the method CC of the invention and encode the protein fragments represented in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1143
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1131
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1071
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1083

Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs: 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid that is a 5' expressed sequence tag (5' EST) obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and diagnostic, forensic, gene therapy and chromosome mapping prodices.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1157
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1097
                          polypeptide can then be used to inhibit cancer development. CD4+ and/or CD8+ T-cells from a patient may be incubated with a polypeptide or nucleic acid of the invention, or an APC expressing such a polypeptide, to cause the proliferation of specific T-cells. The T-cells can be cloned and then administered back to the patient to inhibit cancer
                                                                                                           portions of proteins which are associated with human colon tumours. The invention also specifically discloses 8 human colon tumour proteins (AABI1897-B11904). The nucleic acids, the polypeptides they encode, and antigen presenting cells (APCs, preferably dendritic cells) expressing such polypeptides may be used in vaccines that target tumour cells, especially colon tumour cells, thereby inhibiting the development of cancer. T-cells specific for the polypeptide expressed by the APC are used to, remove tumour cells from biological samples, especially blood or fractions thereof. The sample or the isolated T-cells specific for the
                                                                                                                                                                                                                                                                                                               Claim 1;
                                                                                                                                                                                                                                                                                                                                                 progression of the cancer
                                                                                                                                                                                                                                                                                                                                                                 especially colon

```
ce expression; such as colonic cancer. For example, (1) and (11) may be used to treat disorders associated with decreased expression by creatifying mutations or deletions in a patient's genome that affect the creatifying mutations or deletions in a patient's genome that affect the creatifying mutations or deletions in a patient's genome that affect the creatifying mutations or them. Additionally, (1) may be used to patients own production of them. Additionally, (II) may be used to complements own production of them. Additionally, (II) may be used to complementary sequences may also be used as DNA probes in diagnostic coll culturing the cell to express the protein (II) and its complementary sequences may also be used as DNA probes in diagnostic complementary sequences may also be used as DNA probes in diagnostic complementary sequences may also be used as DNA probes in diagnostic confictate the presence of Similar nucleic acids in samples, and complementate the presence of Similar nucleic acids in samples, and continue the presence of TCAP expression and activity. Cand in assays to identify modulators of TCAP expression and activity. The anti-(I) antibodies may also be used to down regulate as diagnostic agents for detecting the presence of TCAPs in samples cand AAM2494 to AAM24523 represent nucleotide and amino acid sequences and in the promotification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    King
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Xu J,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Colon tumor associated proteins and prevention, diagnosis and treatment % \left( 1\right) =\left( 1\right) \left( 1\right) \left(

The GS (Gene Signature) sequences were obtained from 3'-directed cDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-untranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise with specific mRNAS. Each library is constructed so as to reflect accurately the relative abundance of
                                                                                                                                                                                                                                                                                                                                                                                      different mRNAs in the particular tissue from which it was derived the appearance frequency of a given GS in a CDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for recognising different cell types.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; Page 977;

                                                    have anticancer activity and are highly expressed in ovarian tumor tissue (and some also in testis and breast cancer tissue). The products of the invention can be used for gene therapy. (A) are used (1) for recombinant expression of polypeptides (B) and (il) to isolate complete genes. (B) are used (i) to identify agents suitable for treatment of ovarian cancer; (ii) directly for treating this form of cancer covarian cancer; (ii) directly for treating this form of cancer of specific antibodies. (A) are identified by assembling ESTs (expressed sequence tags) from a particular tissue type before comparison of expression patterns. This allows a significantly longer fragment of the gene to be revealed, so should reduce the number of failures associated with the fact that ESTs from different libraries may represent different parts of the same unknown gene, distorting the estimated frequency of occurrence in a particular tissue. AAZ77450-Z7757 represent the human ovarian tumor cDNA library derived EST fragments described in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1211
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1151

                                                                                                                                             The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA of the mRNA because they are often obtained from oligo-dT primed cDNA

                                               libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design

sequence tags (SESTs), isolated from human, mouse, chicken an tissue sources. The SESTs can have a range of activities depet the tissues they were isolated from. The activities include: chemotractic; proliferative; immunomodulatory; haematopoietic; chemokinetic; analgesic; haemostatic; thrombolytic; antiinfla

antiinflammatory;

depending

g

ed expressed and rat

to AAA45925 represent specifically claimed secreted

Isolated polynucleotides, and encoded proteins, comprising secreted expressed sequence tags (sESTs), useful for treating various disorders such as autoimmune, infectious, and central nervous system disorders

Human genome-derived single exon nucleic acid

gene expression

'n

human

placenta

probes useful

for

The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray, for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful

genetic

placenta. disorders

The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the print specification, but was obtained in electronic format directly from WII

                                                                                                               The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the prob hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             09-OCT-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                        The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              probe; human; microarray; gene expression; cervical epithelial cell;

                                                                                                                                                                                                                                                                                                                                                 The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAI34904 standard; DNA; 411 BP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the prob hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic aetiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the beast cancer, disorders of development, inflammatory diseases of the beast cancer, disorders of development, inflammatory diseases of the beast cancer, disorders of development, inflammatory diseases of the beast cancer, disorders of development.
                                                                                                                                                                                                                                                                                                                                                                                                                         of the breast, fibrocystic changes, proliferative breast disease and non-carcinoma tumours.

Note: The sequence data for this patent did not form part of the prinspecification, but was obtained in electronic format directly from W.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  09-OCT-2001 · (first

For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps. Additionally, N may be used to produce the colon cancer-associated Ps. by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the

The proteins can be produced using standard recombinant technology. The expression of HRGP is closely associated with cell proliferation and the polypeptides and polynucleotides are useful in the diagnosis, treatment and prevention of diseases associated with cell proliferation, particularly immune responses and cancer. The protein or agonists may be administered to treat or prevent a cancer such as adenocarcinoma, leukemia, lymphoma, melanoma mucloma cancer such as adenocarcinoma, leukemia, lymphoma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            allergy; anemia; asthma; atherosclerosis; bronchitis; cholecystitus; Crohn's disease; ulcerative colitis; atopic dermatitis; dermatomyositis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cancer; adenocarcinoma; leukemia; lymphoma; melanoma; myeloma; sarcoma;
tetracarcinoma; Addison's disease; adult respiratory distress syndrome;
allergy; anemia; asthma; atherosclerosis; bronchitis; cholecystitus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Au-young J, Bandman O,

The sequences are also useful in producing pharmaceutical compositions for treatment of pancreatic tumors. AAZ52858-Z53014 represent expressed sequence tag (EST) fragments derived from a huminate composition.

can be used in gene therapy. The colon cancer antigen polynucleotides proteins and antibodies to the proteins are useful for the prevention treatment and diagnosis of colon disorders, such as colon cancer. The polynucleotides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins
                                                                                                    may also be used to prevent diseases such as neural disorders, immune system disorders, muscular disorders, reproductive disorders, gastrointestinal disorders, wounds, renal disorders, infectious diseases, and cardiovascular disorders. AAC98764 to AAC98772 and AAB54007 represent sequences used in the exemplification of the present sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification of the present and the sequences used in the exemplification and the sequences used in the sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypurcleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous of the invention may be used to treat diseases of the peripheral nervous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Wang
                                                                                                                                                                                                                                                                                                                                                                                          Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression. Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, and thrombolytic activity, cancer diagnosis and therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Zhao

The ability of BAG-2 and BAG-3 proteins to interact in cells with Hsc70 was tested by expressing these proteins with N-terminal Flag group tags in 293T human epithelial cells using immunoprecipitation assays. BAG also stimulates Hsc70-mediated adenosine triphosphate (ATP) hydrolysis by accelerating ADP/ATP exchange.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      athanogene-3) protein. The ability of BAG-2 and BAG-3 proteins to interact in cells with Hsc70 was tested by expressing these proteins with N-terminal Flag group tags in 293T human epithelial cells using immunoprecipitation assays. BAG also stimulates Hsc70-mediated adenosine triphosphate (ATP) hydrolysis by accelerating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  of cellular phenotypes through their interactions with Hsc70/Hsp70,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         BAG-1 related proteins from humans, Caenorhabditis elegans and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     including increasing resistance to apoptosis, promoting cell proliferation, enhancing tumour cell migration and metastasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     translocation across membranes). It competes with hip for binding to the Hsc70/Hsp70 ATPase binding domain and promotes substrate release. Gene transfection studies indicate that BAG proteins influence a wide variety
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      athanogene-3) protein. BAG is a HSC/U/HSp/U-regulating protein (HSC70/HSp70 is a molecular chaperone that participates in controlling
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present expanded cDNA sequence encodes human BAG-3 (Bcl-2 associated athanogene-3) protein. BAG is a Hsc70/Hsp70-regulating protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 10; Fig 15; 132pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Schizosaccharomyces pombe useful for modulating tumor cell proliferation, cell migration and metastasis and steroid hormone

ATPase gene of the invention, plus a gene of interest; (b) incubating the cells with a cardioglycoside such as digitoxin, digitogenin, digoxin, bufalin or (especially) ouabain; as digitoxin, digitogenin, digoxin, bufalin or (especially) ouabain; (c) contacting the incubated cells with a fibrinogen-coated solid matrix; and (d) detecting any cells bound to the matrix. The new selectable marker is particularly useful where antibiotic resistance selection is undesirable, e.g. in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ouabain. A claimed method for detecting transfection or transformation of a eukaryotic cell comprises: (a) transforming
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  rat protein (see AAW88290) has been mutated to cysteine. This mutated protein can be used as a novel selectable marker. The mutation, obtained by mutagenesis of the (Na,K)-ATPase gene (see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This nucleotide sequence encodes a new mutated 1 subunit (see AAW88287), in which the Leu-879

                                           This nucleotide sequence encodes a new mutated (Na,K)-ATPase alpha 1 subunit (see AAW88288), in which the Leu-881 residue of the native rat protein (see AAW88290) has been mutated to cysteine. This mutated protein can be used as a novel selectable marker. The

The new selectable marker is particularly useful where antibiotic resistance selection is undesirable, e.g. in gene therapy.
                                 interest; (b) incubating the cells with a cardioglycoside such as digitoxin, digitogenin, digoxin, bufalin or (especially) ouabain; (c) contacting the incubated cells with a fibrinogen-coated solid matrix; and (d) detecting any cells bound to the matrix. The new
                                                                                                          This mutated protein can be used as a novel selectable marker. The mutation, obtained by mutagenesis of the (Na.K)-ATPase gene (see AAV84.297), causes a loss in sensitivity of the encoded enzyme to ouabain. A claimed method for detecting transfection or transformation of a eukaryotic cell comprises: (a) transforming or transfecting the cell with a vector carrying a nucleic acid encoding a mutated (Na.K)-ATPase gene of the invention, plus a gene of interest; (b) incubating the cells with a cardioglycoside such interest; (b) incubating the cells with a cardioglycoside such
                                                                                                                                                                                                                                                                                                                                                This nucleotide sequence encodes a new mutated 1 subunit (see AAW88288), in which the Leu-879
                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; Page 54-58;
